# Photoshop timeline and animated gifs

Lets make some gifs !

- Create multiple layers
- Move positioning of objects slightly in each layer using edit free transform
- Select all layers using shift key
- window>timeline>make frames from layers
- Change time signature of each frame
- Set repetitions to forever
- Decide if you want a background or transparency
- File>export>save for web

SHIFTY

Puppet Warp

- Puppet warp is a fun way to turn a still image into a gif
- edit>puppet warp
- Add pins to create joints, and to keep sections from distorting when you move other sections
- Hit enter to render changes
- Create a sequence of puppet warp frames to create a gif

Warp your Friend (in class exercise)

- Take a photo of ur friend
- Isolate them from the background and place them in a fun setting using photoshop
- Animate your friend in their new environment using puppet warp
